

V-axis encoding peaks in posterior visual cortex across all five frequency bands

a δ (1-4 Hz)

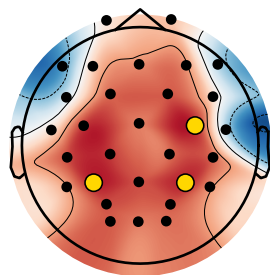

F7/d: -0.33

b θ (4-8 Hz)

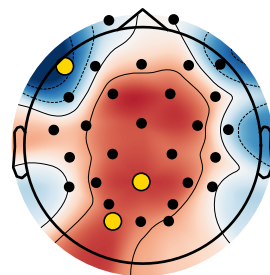

F7/t: -0.35

c α (8-13 Hz)

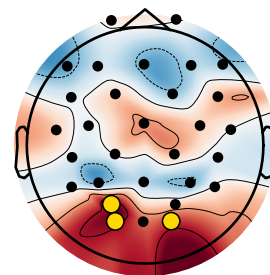

P3/a: +0.37

d β (13-30 Hz)

F7/b: -0.47

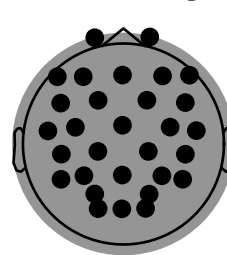

e γ (30-47 Hz)

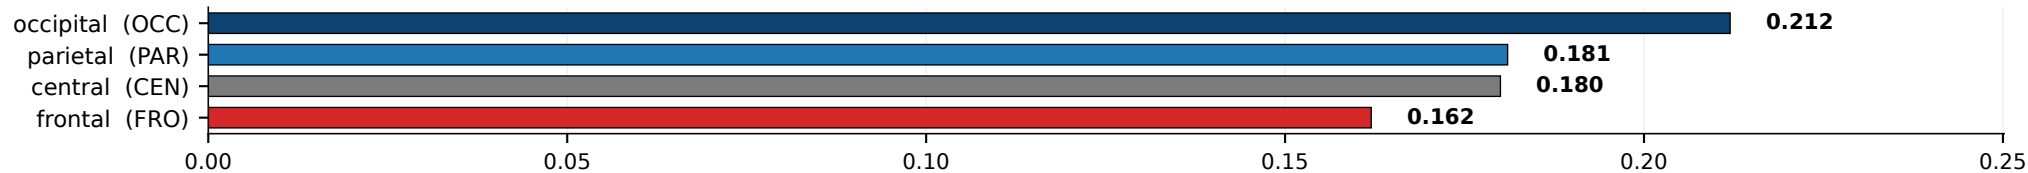

PO3/g: +0.48

Pearson r (V-axis encoding)

**32-channel
10-20 montage**

f

Posterior dominance: occipital $|r| = 1.34 \times$ frontal $|r|$. Top single (channel, band) cells: PO3 / γ +0.48, F7 / β -0.47, O1 / γ +0.44.
