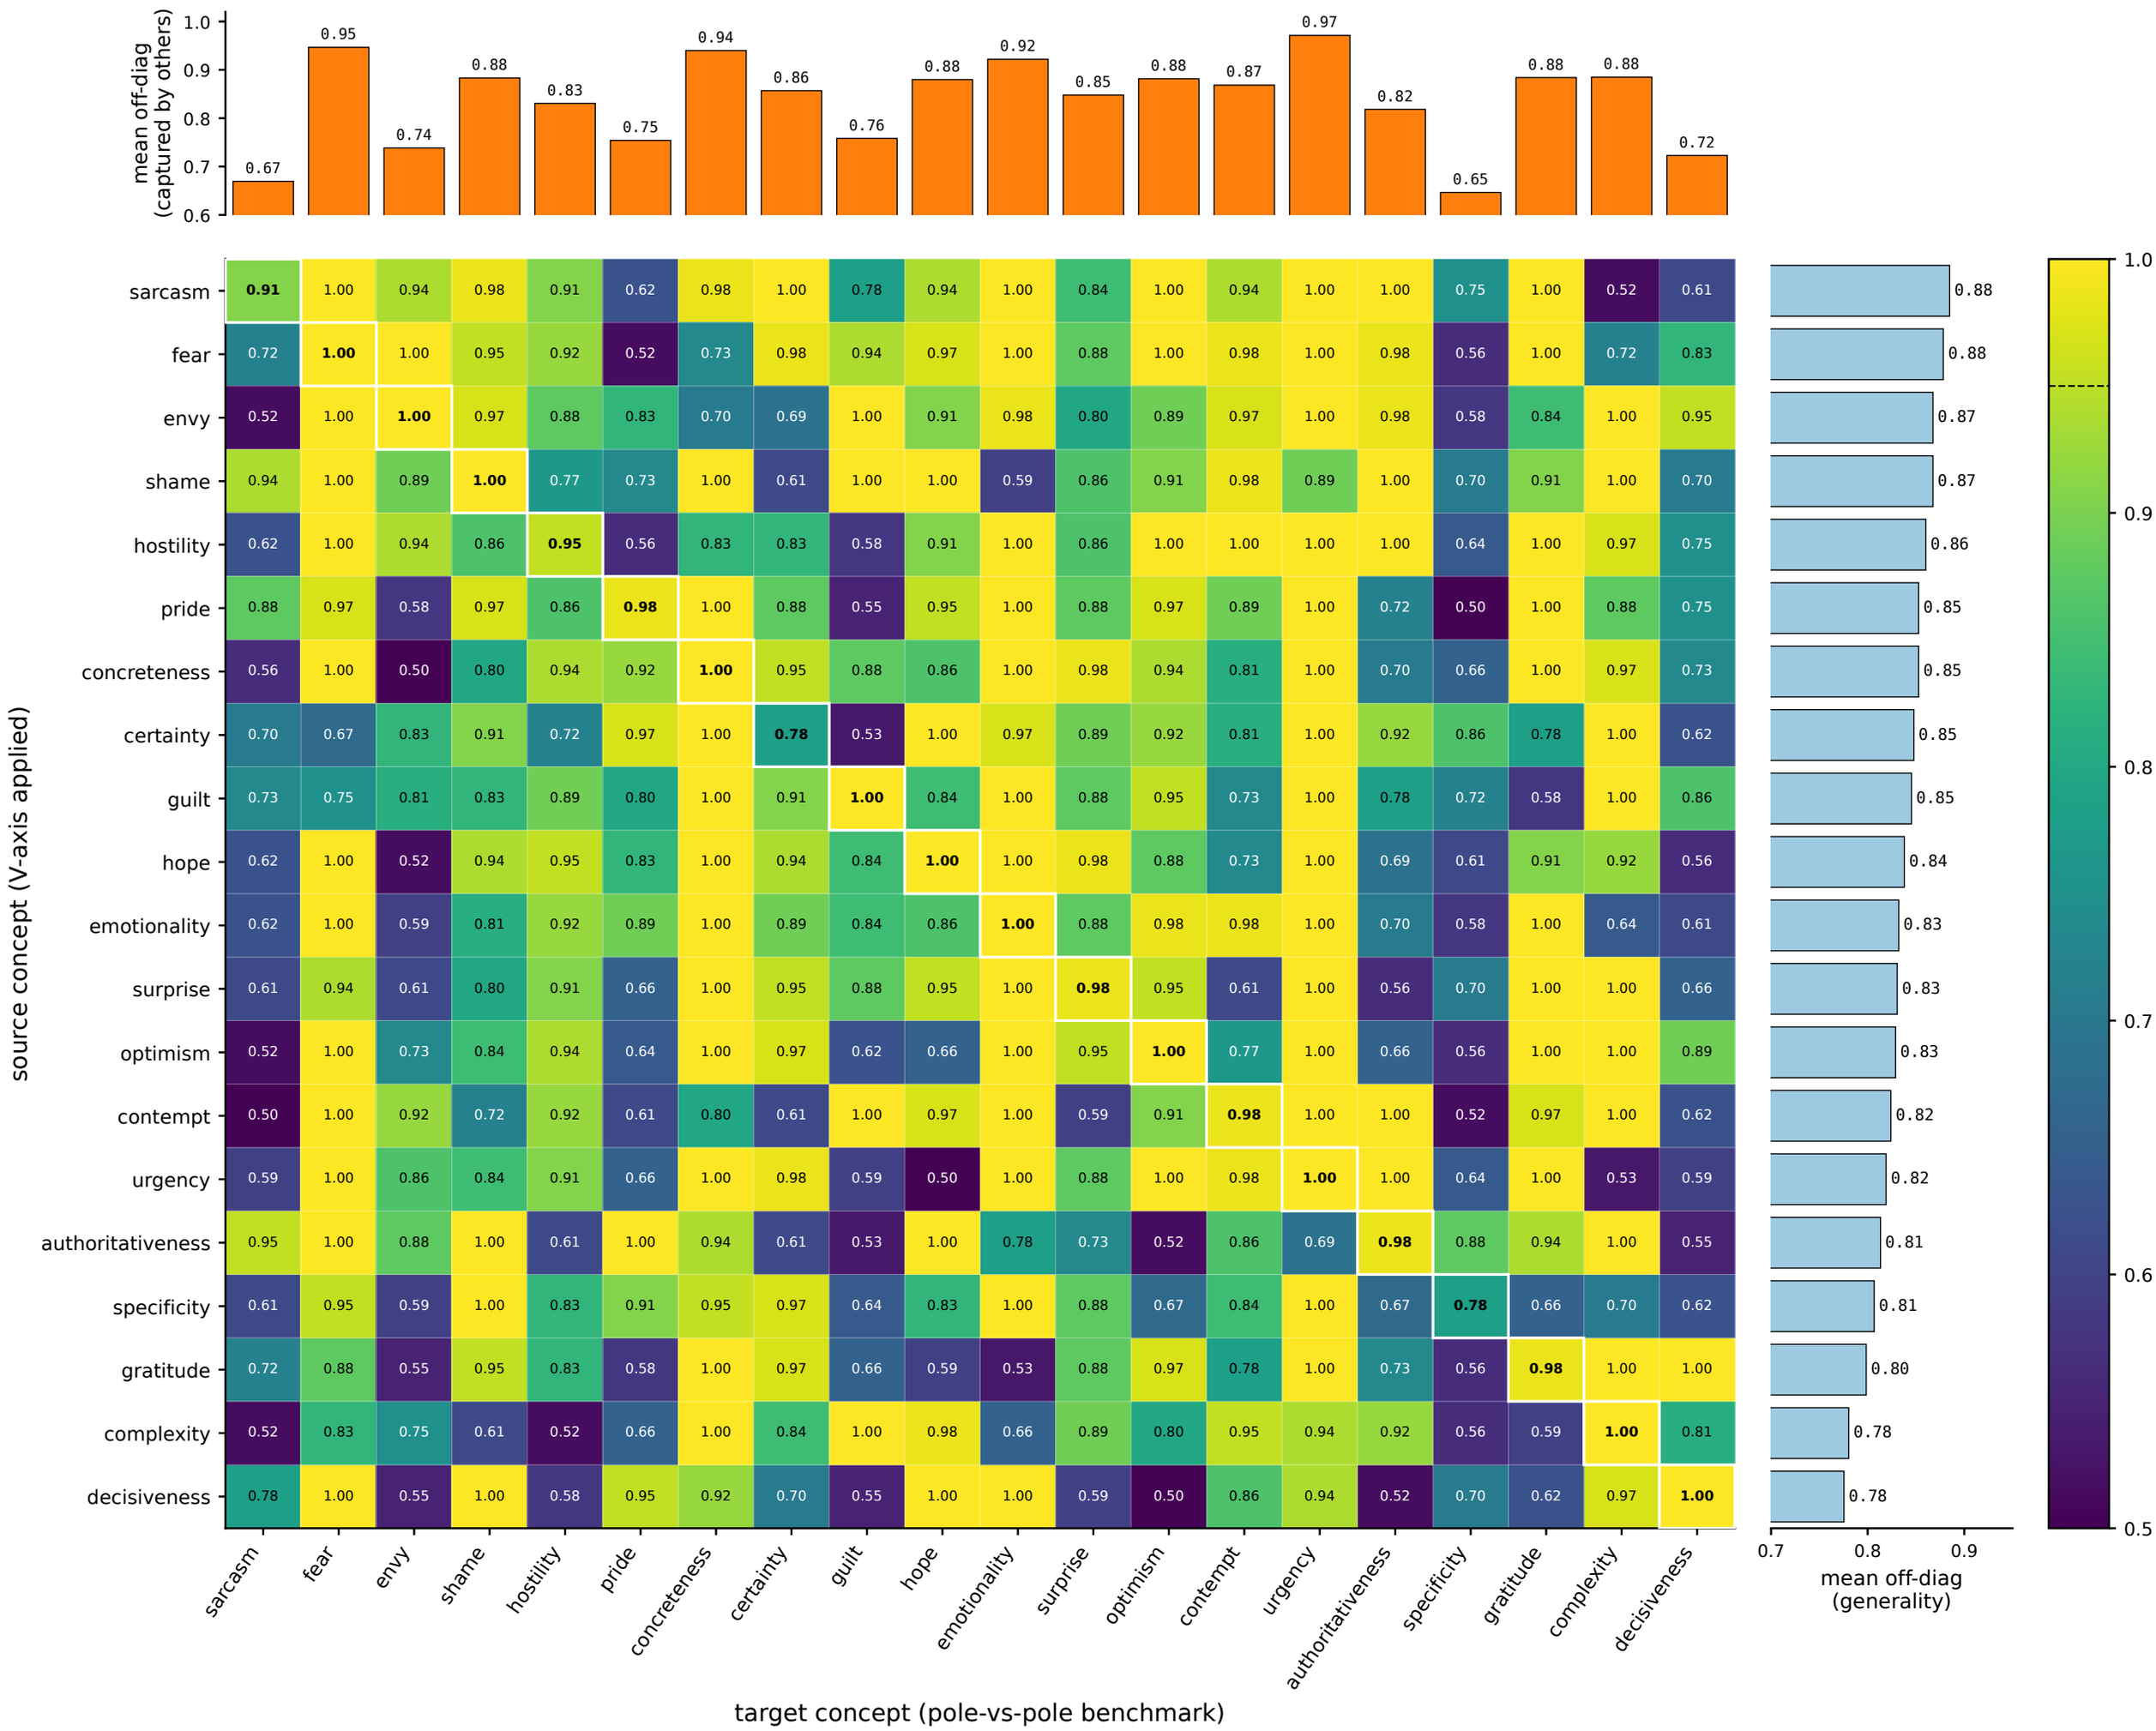
Cross-concept transfer matrix: the recipe extracts concept-specific late-layer directions

Mean self-AUC (diagonal) = 0.97 | mean off-diagonal AUC = 0.84 | self-vs-other gap = +0.13 (20×20 concepts; rows sorted by generality)



Source: reports/r6_concept_transfer_matrix.json (Qwen3-4B, penultimate layer, 12 train + 8 test stories per concept). Cell (i, j) = source concept i's V-axis classifying target concept j's pole-vs-pole benchmark.
