

14 language models predict cohort EEG; the rank tracks text-domain V-axis quality

■ top tier ($r_{\text{behav}} \geq 0.85$, $n=7$)
 ■ middle tier ($0.6 \leq r_{\text{behav}} < 0.85$, $n=4$)
 ■ out tier ($r_{\text{behav}} < 0.6$, $n=3$)

(a) Brain prediction: r vs cohort EEG-DE-Ridge

(b) Text anchor: r vs behavioural valence

Source: reports/merge_multi_llm_eeg_results.json. Error bars: Fisher-z 95% CI on Pearson r over $n = 28$ FACED stimuli. Tiers defined on text behavioural-r (panel b) and applied consistently to panel (a).
